

## Science & Sustainability Research Intern

### Company

Rubicon Carbon is a next-generation carbon solutions provider. Led by a world-class management team, Rubicon is an innovative platform that channels capital to unlock at-scale decarbonization projects and delivers trusted, enterprise-grade solutions for carbon credit purchases. Rubicon strives to deliver greater scale, confidence, and innovation across all facets of the carbon market and meet the growing demand for end-to-end, high-integrity emissions reduction solutions.

### Position Overview

As Science & Sustainability Research Intern, you will report to TBD, and you will work closely and cross-functionally across the entire organization. You will play a key role in keeping the Rubicon Carbon team informed on news and developments across the Sustainability space, with a particular focus on voluntary and compliance carbon markets. You will also contribute to external communications efforts, including blog posts and a monthly newsletter. This position is a great opportunity to gain a broad base of knowledge on the voluntary carbon market and experience in communications, including relevant developments in policy and corporate climate action.

The ideal candidate has experience conducting research in a business environment, including searching, interpreting, and summarizing news reports as well as primary literature. Strong writing and analytical skills are required. An interest in carbon markets, carbon policy, and/or corporate sustainability action is strongly encouraged.

***This is a remote position but candidates must be based within one hour of New York City, Los Angeles, or San Francisco***

### Responsibilities

- Conduct daily searches of news related to carbon markets and corporate climate action
- Work with other team members to develop daily news updates and a weekly newsletter for internal distribution
- Support the development of a public monthly newsletter by providing news stories and references as well as content
- Access and summarize carbon market price, issuance, and retirement data
- Additional opportunities to conduct research and/or author content related to carbon markets may be available, depending on the candidate's interests and experience.

### Required Skills and Experience

- Undergraduate degree, or substantial progress towards a degree, in sustainability, environmental science, economics, or related field
- Strong research, analysis, and writing skills
- An interest in carbon markets and corporate climate action
- A passion around climate change and sustainability

**Compensation**

The market rate for this internship position is \$18 per hour.
