

MichiganTech

Michigan Technological University Competency Model

Introduction

Michigan Tech developed this competency model to assist and guide employees at all levels and functions at the University in understanding the competencies required for the success in their position. Eleven competencies are identified; five standard competencies are foundational and apply to all employees regardless of position or function at the University and six competencies have varying proficiency levels.

The six competencies with varying proficiency levels are: Leadership, Knowledge, Accountability, Communication, Continuous Improvement, and Safety and Risk Management.

The five standard competencies include: Confidentiality and Sensitive Information; Diversity, Cultural Competence, and Inclusion; Ethics; Service Excellence; and Fiscal Stewardship.

What is a Competency?

A competency is the ability to apply or use a set of related knowledge, skills, and abilities to perform effectively in the work environment. Competencies are then applied as measurable and observable behaviors and activities that impact performance.

How to Use this Competency Model?

Competencies aid in the recruitment and selection of employees, the assessment of employee performance, and discussions related to career progression and employee development.

In each of the following competency charts, the competency definitions can be utilized directly on job postings.

Proficiency levels will also be determined for each position and discussed annually with staff during the performance management process.
