Wisconsin.....	55
Additional Resources.....	80

INTRODUCTION

This directory was created to help Cooperative Weed Management Areas (CWMAs), Cooperative Invasive Species Management Areas (CISMAs), and similar entities find appropriate vendors of native plant material for revegetation following invasive plant treatments. Prepared by the Midwest Invasive Plant Network (MIPN) in partnership with the U.S. Forest Service (USFS), the directory provides information for companies serving Iowa, Illinois, Indiana, Michigan, Minnesota, Missouri, Ohio, and Wisconsin.

Many state agencies and other non-profits maintain listings of native plant nurseries and vendors. Where known, these resources are linked in the “Additional Resources” section of this document, as are state lists of conservation districts, which often hold annual native plant sales. The intention with this project was to supplement existing efforts on a regional scale by providing somewhat more in-depth information about the companies and their products to help users more readily identify vendors that best fit their project needs. To reach this goal, we drew heavily from existing lists and internet search results to build an initial contact list of 206 companies. In June of 2018, these contacts were each sent a twelve-question online survey that took five minutes, on average, to complete. The listings contained in this document reflect the results of the survey obtained over a three-month period. Companies that declined to answer the survey are not listed.

The information provided is subject to change without notice. There was no financial exchange associated with listing in this directory, and the presence of a listing does not constitute an endorsement by MIPN or USFS. Any company selling native plants and serving the Midwest is welcome to add their information to this directory. MIPN aims to update the directory at least annually; vendors can request editing, addition, or removal of a listing by emailing mipn@mortonarb.org or calling (630) 719-5649.

GUIDANCE ON TERMS USED IN LISTINGS

If “Retail” is checked, the company supplies plants to and works with managers of small sites such as small public and private gardens, residential properties, small commercial properties, etc. If “Wholesale” is checked, the company supplies plants to and works with managers of large sites such as multi-acre restorations and major new developments. Please also consult the company’s minimum order size, if any.

If “Ecosystem-specific seed mixes” is checked, the company sells one or more mixes that it has developed for use in specific ecosystem types (e.g., “emergent wetland seed mix”). **Species in mixes should always be double checked for site/project suitability.**

If “Wildlife-specific seed mixes” is checked, the company sells one or more mixes that it has developed to encourage or enhance habitat for specific wildlife taxa (e.g., “pollinator mix”). **Species in mixes should always be double checked for site/project suitability.**

If “NRCS Practice seed mixes” is checked, the company sells one or more mixes that meet practice standards for a Natural Resource Conservation Service program. **Please note that strict adherence to practice standards is required for NRCS cost-share programs. Customers should always double check that the plant material they are buying meets the most recent NRCS specification prior to purchase.**

If “State-specified seed mixes” is checked, the company sells one or more mixes that meet specifications set by state agencies within the company’s service area. Some of these mixes may contain non-native species, depending on the issuing agency and intended use. **Customers who are required to use state-specified mixes by regulation or through funding requirements should always double check the plant material they are buying against the required specification prior to purchase.**

If “Local ecotype” is checked, the company self-identifies as specializing in plant material that is native and genotyped to a specific region. **Customers seeking plant material with genetics from within a specific distance of their site should discuss this with potential vendors to ascertain suitability.**

If “Native to the U.S.” is checked, the company self-identifies as specializing in plant material that is native to North America. **Customers should make sure the species they are buying are native to and suitable for the site at which they are working.**

If “Exotic/non-native/non-invasive” is checked, the company sells at least one species that is not native to North America. **Per the [USFS Native Plant Materials Policy](#), exotic but non-invasive species should only be used as part of revegetation/restoration funded by USFS under special circumstances.**

If “Exotic/Invasive in the Midwest” is checked, the company (at time of publication) sells at least one species that appears on MIPN’s [Midwest Invasive Plant List](#). Some of these invasive species are regulated in certain states while others are not. **Per the [USFS Native Plant Materials Policy](#), invasive species should never be used as part of revegetation/restoration funded by USFS.**

Exotic/non-native/non-invasive: ✓

Exotic & listed as invasive in Midwest: No

Voluntary action against invasive plants, if any: We have researched and discontinued the sale of many non-native, invasive species. We do not sell burning bush, Japanese barberry, Norway maple, to name a few. We are a small company in a small rural area and we try to educate our customers about invasive species and what the difference is between a true invasive species and an aggressive native species. We encourage the use of native species in foundation plantings and spend quite a bit of time in the early spring talking to groups (master gardeners etc) about the benefits of natives (larval food sources etc) and how to use them in a residential landscape.

Additional information, if any: Our native trees are grown in the Rootmaker System.
