

Measuring for Management: The Great Lakes Observing System

**A Collaborator & Facilitator for Data
Collection, Management and Integration in
the Great Lakes Region**

Wednesday, May 7, 2014

**Great Lakes Workshop Series on Remote
Sensing of Water Quality, 2**

Jennifer Read, Executive Director

GOALS

- Increased familiarity with Great Lakes Observing System
- Increased understanding of GLOS mission and approach
- Piqued interest in partnering with GLOS

Overview

- What is GLOS?
 - Role
 - Activities
- GLOS and You
- Ways to Engage

40 ZETTABYTES

[43 TRILLION GIGABYTES]

of data will be created by 2020, an increase of 300 times from 2005

Volume SCALE OF DATA

It's estimated that 2.5 QUINTILLION BYTES

[2.3 TRILLION GIGABYTES]

of data are created each day

Most companies in the U.S. have at least
100 TERABYTES

[100,000 GIGABYTES]
of data stored

The FOUR V's of Big Data

From traffic patterns and music downloads to web history and medical records, data is recorded, stored, and analyzed to enable the technology and services that the world relies on every day. But what exactly is big data, and how can these massive amounts of data be used?

As a leader in the sector, IBM data scientists break big data into four dimensions: **Volume, Velocity, Variety and Veracity**

Depending on the industry and organization, big data encompasses information from multiple internal and external sources such as transactions, social media, enterprise content, sensors and mobile devices. Companies can leverage data to adapt their products and services to better meet customer needs, optimize operations and infrastructure, and find new sources of revenue.

By 2015
4.4 MILLION IT JOBS
will be created globally to support big data,
with 1.9 million in the United States

As of 2011, the global size of data in healthcare was estimated to be

150 EXABYTES

[161 BILLION GIGABYTES]

30 BILLION PIECES OF CONTENT

are shared on Facebook every month

Variety DIFFERENT FORMS OF DATA

By 2014, it's anticipated there will be

420 MILLION WEARABLE, WIRELESS HEALTH MONITORS

4 BILLION+ HOURS OF VIDEO

are watched on YouTube each month

400 MILLION TWEETS

are sent per day by about 200 million monthly active users

The New York Stock Exchange captures

1 TB OF TRADE INFORMATION

during each trading session

Velocity ANALYSIS OF STREAMING DATA

By 2016, it is projected there will be

18.9 BILLION NETWORK CONNECTIONS

— almost 2.5 connections per person on earth

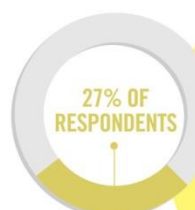

Modern cars have close to
100 SENSORS

that monitor items such as fuel level and tire pressure

1 IN 3 BUSINESS LEADERS

don't trust the information they use to make decisions

in one survey were unsure of how much of their data was inaccurate

Veracity UNCERTAINTY OF DATA

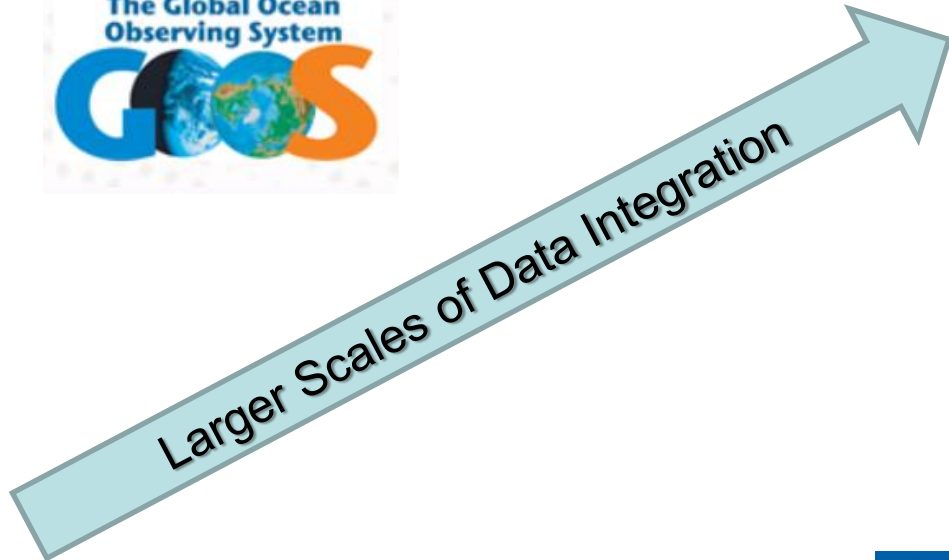

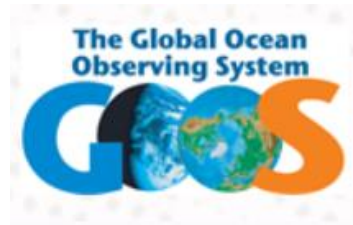

Poor data quality costs the US economy around

\$3.1 TRILLION A YEAR

Sources: McKinsey Global Institute, Twitter, Cisco, Gartner, EMC, SAS, IBM, MEPTec, QAS

A Global Voice for the Great Lakes

GLOS Role

Research Community

Decision-Makers

Resource Managers

Connecting data users to data providers
in ways that support management and
policy decisions.

GLOS ACTIVITIES

Focus Areas

ECOSYSTEM HEALTH

- Fisheries, Areas Of Concern(AOC)/LaMPs

MARITIME OPERATIONS

- Recreational boaters

PUBLIC HEALTH & WATER SECURITY

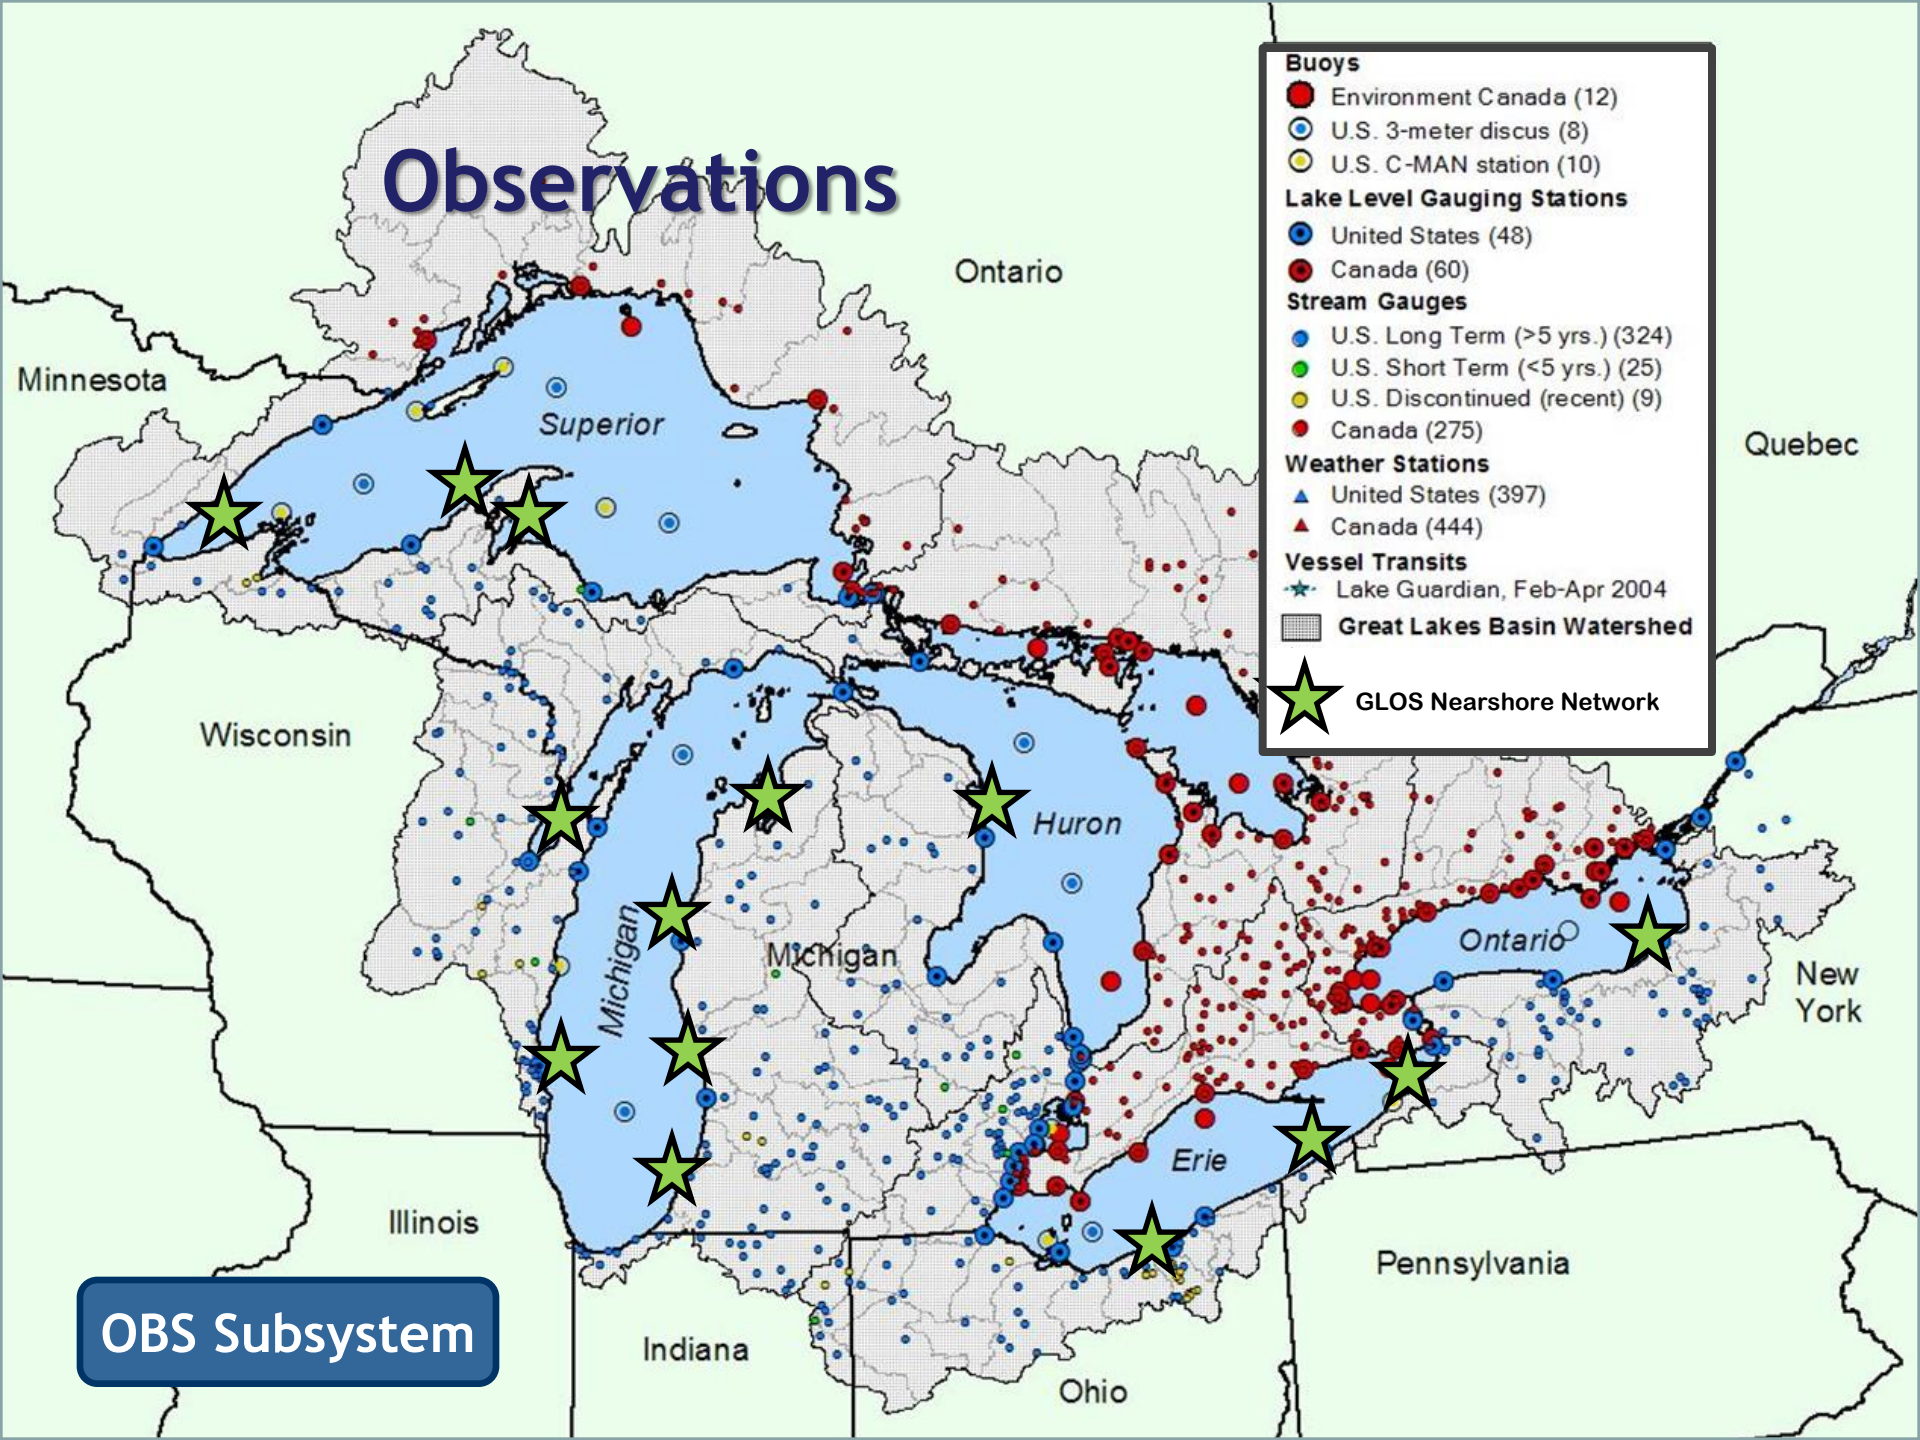

- Beach managers, water intake operators

CLIMATE CHANGE ADAPTATION

- Municipal water infrastructure managers

Observations

Remote Sensing

- Physical Obs – wind, waves, temp
- Lake Bottom Mapping
- Lake Ice
- Shoreline Mapping
- Lake Quality

Fixed Buoys Wed 16:00Z 21-Mar-12
MODIS Sea Sfc Temperature 1km (F) Wed 16:21Z 21-Mar-12

OBS Subsystem

Data Management

- Data Infrastructure
 - Hardware
 - Software – US IOOS / regional
- Applications
 - Data Storage and retrieval
 - Viewers and access

DATA Subsystem

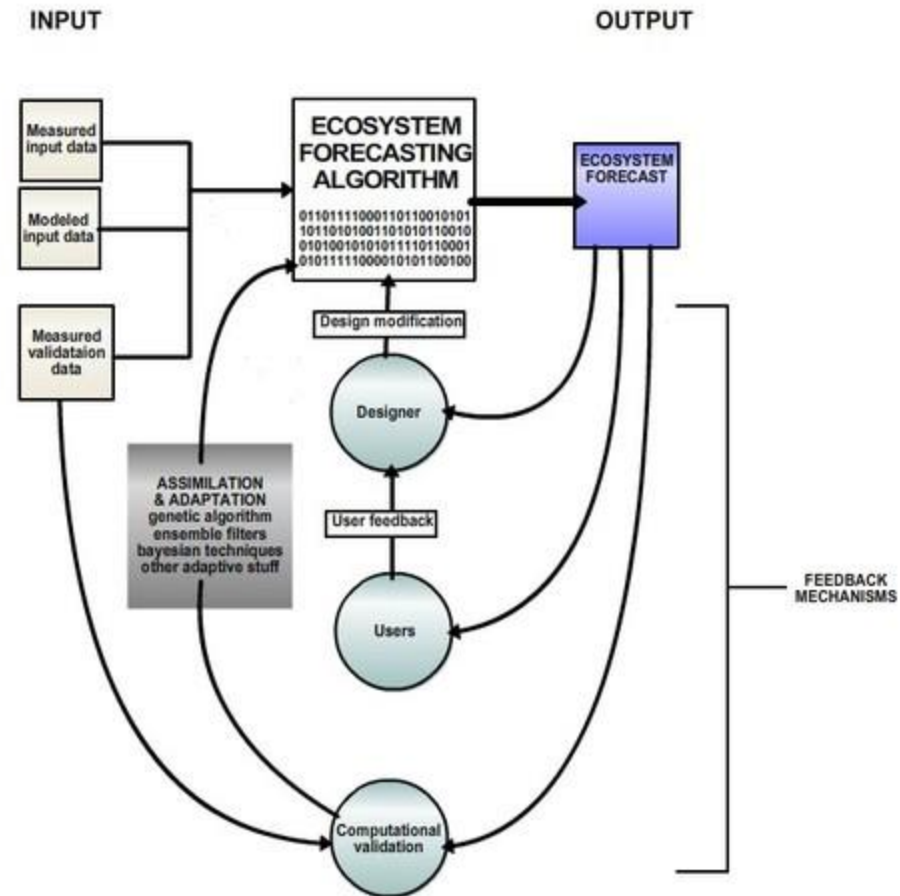

Models

- Currents, water levels, waves, pollution tracking, sediment, temperature
- Real-time models (24/7)
 - Nowcast (current conditions)
 - Forecasts (up to 120 hours)
 - Scenarios (past, future-climate)
- Beach-scale to Lake-scale

MODEL Subsystem

FEEDBACK IN ECOLOGICAL FORECASTING SYSTEMS

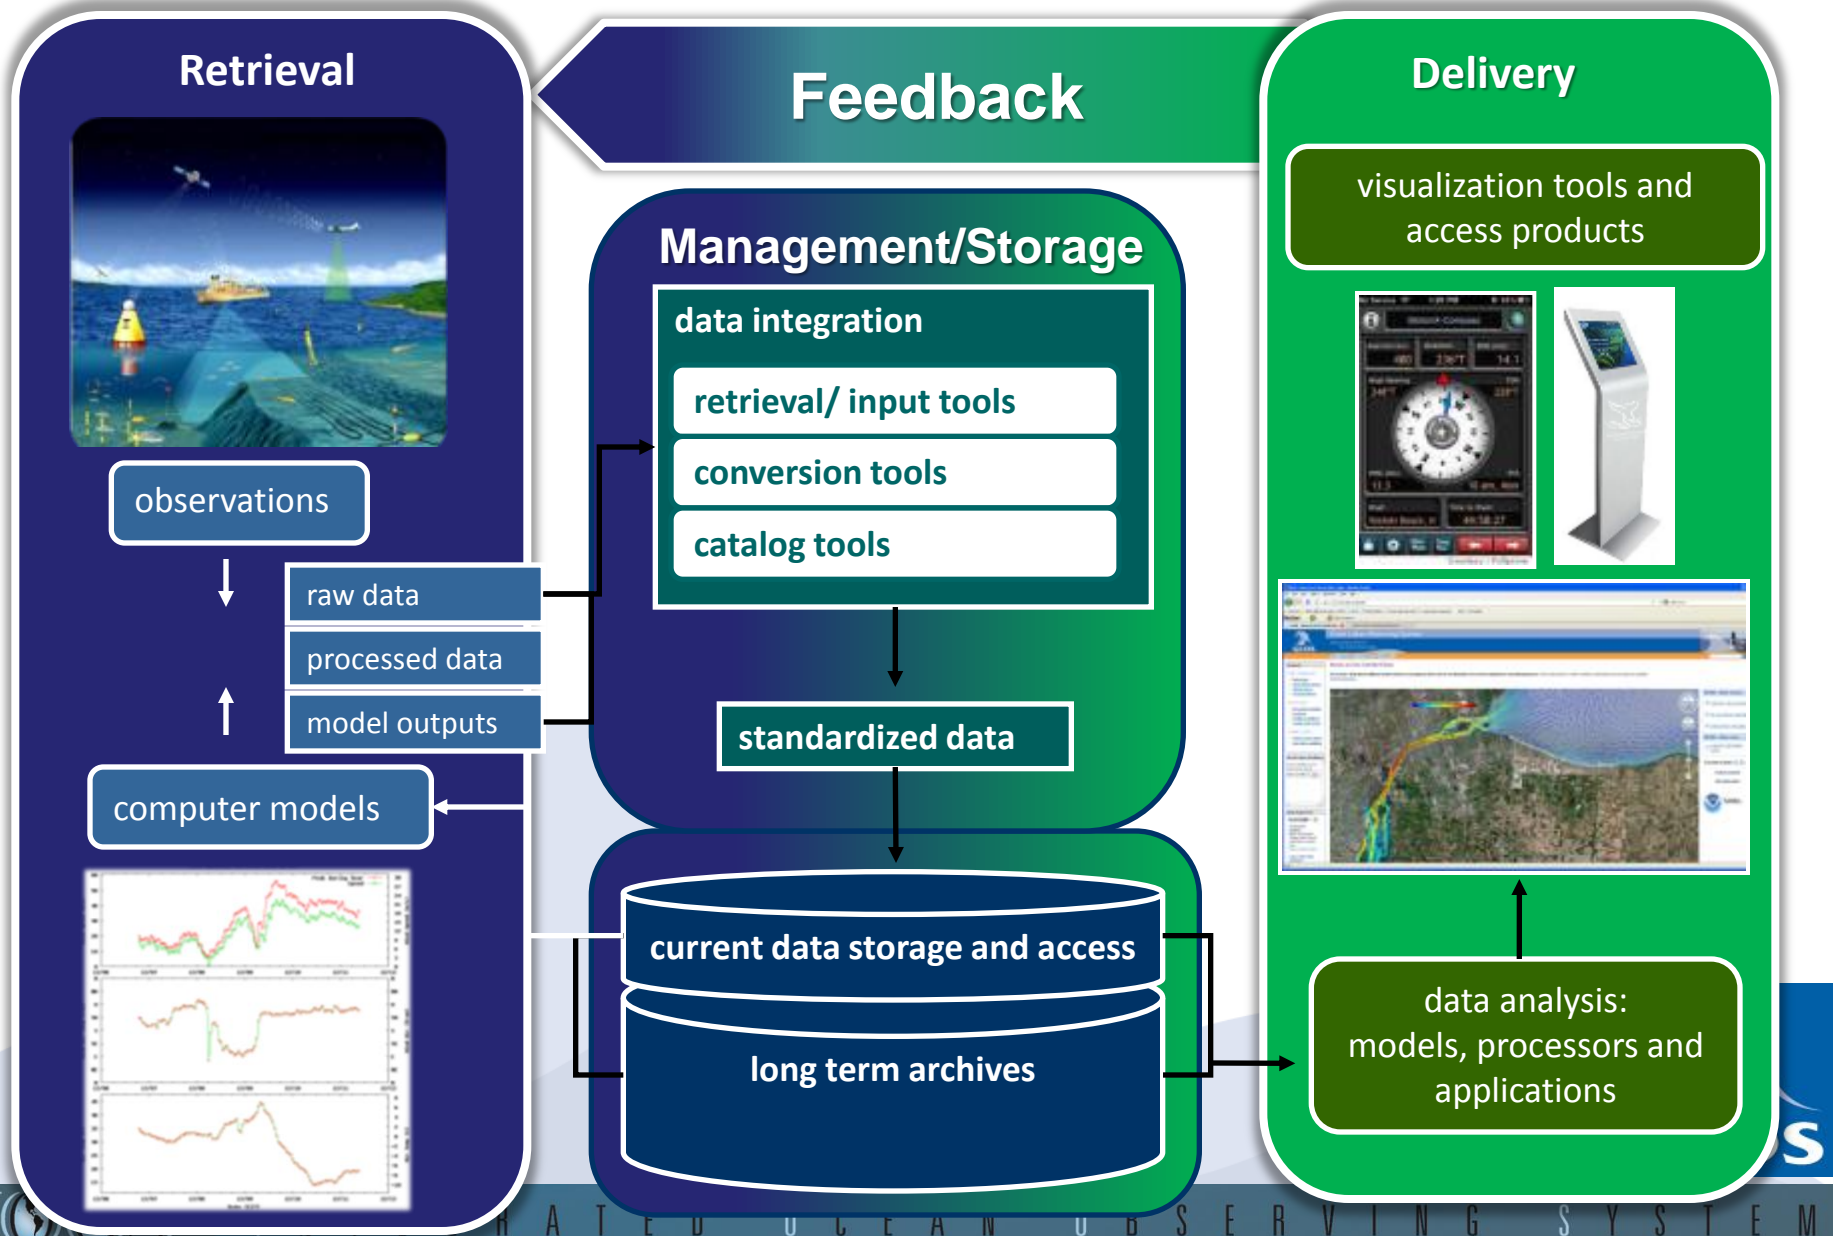

Facilitation & Coordination

- Ecosystem Forecasting
- GEO Great Lakes
- Regional communities of practice, e.g.,
Observations, Data management
- Adaptive Management

OUT Subsystem

It All Fits Together...

Program **M**anagement **A**nd **P**lanning

Mission

Observations

Data
Management
and
Communication

Modeling
and
Tools

Education
and
Outreach

OBS

DMAC

MODEL

OUT

Vision

Ecosystems

ECO

Climate Adaptation

Public Health

PH

GLOS and YOU: Data Users

- GLOS Data Portal
 - Melding Obs Explorer and Data Catalog into one product
- GLOS metadata

Metadata

- Metadata allows users to find and link to useful data
- Linked from Data Portal Search Results
- Standardized and ISO compliant
- GeoNetwork – registered with GEOSS

GLOS and YOU: Data Provider

- GLOS is a distributed system
- Connect to GLOS = connect to GEOSS
- Contact dmac@glos.us
- *But what about other ways to engage?*

Points of Entry

GLOS Planning and Evaluation Cycle

**Ideas
Invited**

Month	Year 1 Implement	Year 2 Analyze and Adapt	Year 3 Analyze and Adapt	Year 4 Set Priorities	Year 5 Develop Strategies
Jan	Finish Previous Cycle Implementation				<u>Release request for pre-proposal</u>
Feb	Re-Scope Yr 1 Annual Plan	Re-Scope Yr 2 Annual Plan	Re-Scope Yr 3 Annual Plan	Re-Scope Yr 4 Annual Plan	Re-Scope Yr 5 Annual Plan
March	<div>We're Here!</div>				
April					
May					
June	Begin New Cycle Implementation	Progress Updates and Evaluation	Project Evaluation & Strategic Plan Update	Complete Strategic Plan update	Review and select project proposals – Tech Advisory Committee
July					
Aug					Develop IOOS proposal
Sep					
Oct					Submit IOOS proposal
Nov	Project Presentations	Project Updates	Evaluation & Planning	Promote Strategic Plan	In Review- Success Stories
Dec					
Semi-Annual webinar (June) and Annual (November) meetings – opportunities for Stakeholder and Industry to meet/provide input					

Thank You
