

Great Lakes Workshop Series on Remote Sensing of Water Quality

NASA Water Resource Program Update

7-8 May, NOAA - GLERL

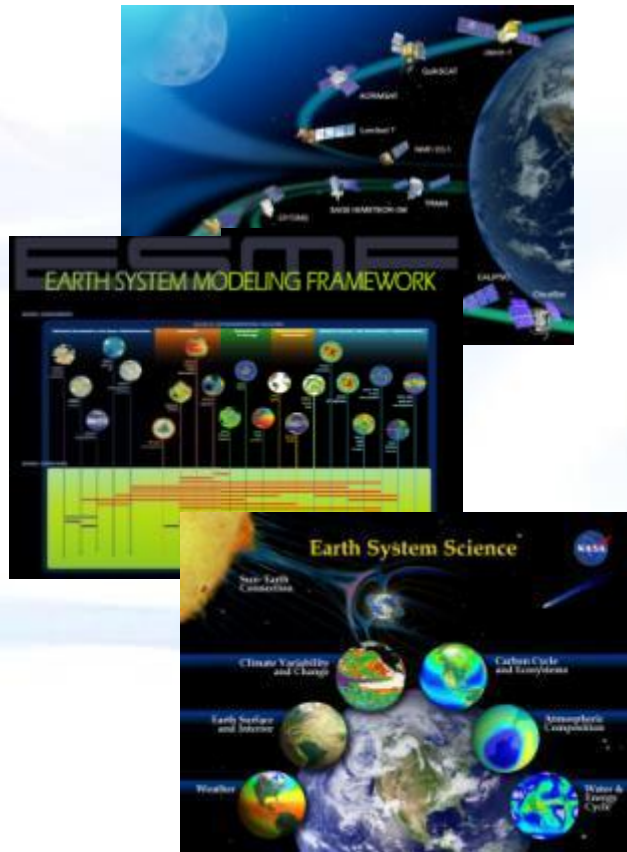

NASA Applied Sciences Program

A Pathway Between Earth Science & Society

**Results of
NASA Earth
Science Research**

**Uses by Partners
and Stakeholder
Communities**

**NASA
Applied Sciences
Program**

GEOSS Societal Benefit Areas

The NASA Water Resources Program Element:

The Water Resources Program Element addresses concerns and decision processes that are related to water availability, water forecast, and **water quality**. The goal of the Water Resources Program Element is to apply NASA satellite data to improve the Decision Support Tools (DSTs) of user groups that manage water resources. Implementation requires close and enduring partnerships with Federal agencies, academia, private firms, and international organizations.

Water Resources Projects:

Projects are tactical implementations led by Principle Investigators, driven by water management challenges, and ultimately sustained by water resource information stakeholders.

Programmatic Activities:

National and international activities to improve skills, share data and applications, and broaden the range of users who apply satellite data and Earth science in water resource decisions.

NASA Applied Sciences Program Water Resources

Earth Science Serving Society

The goal of the ASP Water Resources application area is to apply NASA satellite data to improve the decision support systems of organizations and user groups that manage water resources. The ASP Water Resources application area partners with Federal agencies, academia, private firms, and international organizations.

Water Quality in Applied Sciences (HAQ)

NASA Partnership with NOAA on Harmful Algal Bloom Monitoring and Forecasts in Lake Erie

**Experimental
Lake Erie Harmful Algal Bloom Bulletin**
2011-014
08 September 2011
National Ocean Service
Great Lakes Environmental Research Laboratory
Last bulletin: 01 September 2011

Figure 1. MERIS image from the European Space Agency. Imagery shows the spectral shape at 681 nm from September 03, where colored pixels indicate the likelihood of the last known position of the *Microcystis* spp. bloom (with red being the highest concentration). *Microcystis* spp. abundance data from shown as white squares (very high), circles (high), diamonds (medium), triangles (low), + (very low) and X (not present).

Figure 2. Forecast position of *Microcystis* spp. bloom for September 08 using GLCTS modeled currents to move the bloom from the September 03 image.

Please note:
-MERIS imagery was distributed by the NASA CoastWatch Program and provided by the European Space Agency.
-http://www.glerl.noaa.gov/research/remote_sensing/08/08lake_erie_0809.html
-Cell counts were collected by the Great Lakes Environmental Research Laboratory.
-The wind data is available through the National Data Buoy Center and the National Weather Service.
-Modeled currents were provided through the Great Lakes Coastal Forecasting System.

Conditions: A massive *Microcystis* bloom persists throughout most of Lake Erie's Western Basin.

Analysis: As indicated in satellite imagery from Saturday (9/3/2011), an enormous *Microcystis* bloom was present in western Lake Erie. The southern extent of the bloom was remotely observed along the coast of Ohio from Maumee Bay to Catawba Island. The northern extent of the bloom was observed to be consistent along the Michigan coast from Northern Maumee Bay to the mouth of the Detroit River. The eastern-most portion of the bloom was observed to be consistent along the coast of Lake Erie.

OBJECTIVE

Produce Harmful Algal Bloom (HAB) products and forecasts based on observations from MODIS and (formerly) ESA MERIS for Lake Erie.

OPERATIONAL PARTNERS

Ohio EPA, Ohio DNR, Toledo Water Supply, Sandusky Water Supply, Cuyahoga Dept of Health, NOAA

APP SCI INVESTIGATORS

R. Stumpf (PI)

Highlight: Produced a bulletin for HABs that was hosted by NOAA; this tool helped reduce the impact/costs to the public from HABs. According to Ohio EPA, these products help focus and minimize resources necessary for large scale

Water Quality in Applied Sciences (WR)

Mapping and Monitoring the Extent of Cladophora Algae in the Great Lakes using Multi-Resolution, Multi-temporal Satellite Imagery

OBJECTIVE

Map Cladophora algae extent in near-shore regions from tracking and responding to nuisance algae issues

OPERATIONAL PARTNERS

EPA

APP SCI INVESTIGATORS

R. Shuchman, C. Brooks, M. Sayers, M Auer, G Meadows, N Jesse, A Dayton

Highlight: Mapped algae extent using Landsat; EPA funded the operational use of this algorithm under the Great Lakes Restoration Initiative

Create the Future

2 Current Opportunities for Supporting Great Lakes Activities in Applied Sciences

Health and AQ solicitation

**Released as Element A.44 of
NASA's 2013
*Research Opportunities in Space
and Earth Science***

Proposals due: April 24, 2014

**[http://nspires.nasaprs.com/external/
/](http://nspires.nasaprs.com/external/)**

Water Resources Solicitation

**Released as Element A.45 of
NASA's 2013
*Research Opportunities in Space
and Earth Science***

Proposals due: April 30, 2014

**[http://nspires.nasaprs.com/external/
www.c3.nasa.gov/water](http://nspires.nasaprs.com/external/www.c3.nasa.gov/water)**

Upcoming Water Resources Applied Research Activities

- PEER Water Initiative – USAID
- Global Agriculture - GEOGLAM Next Phase – USDA
- Sustainable Land Imaging - USGS
 - Study Report to Congress and OMB
 - Summer 2014
- NASA – WSWC Meeting
 - 18-20 Aug
 - JPL, Pasadena, CA
- Water Resources Team Meeting
 - Fall 2014

CHALLENGE:

What are other ways for AppSci to support the GL community in bridging research to operations?

- *Key partners?*
- *Key water quality challenges (for the operational community, not just the science/research community)?*
- *Models or analyses that can (within 2-3 years) become decision support tools or operationalized?*
- *Can training help?*
- *Other ideas?*

*Thanks to the GL community
and GRC for organizing this
workshop and for the
opportunity to learn more
about on-going work,
activities, and potential
synergies.*

*Thanks to the Water
Resources Applied
Research Program Team:
Forrest Melton, ARC
John Bolton, GSFC
Christine Lee, AAAS Fellow.*

Remote Sensing for Drought Monitoring and Response Workshop

February 25th and 26th, 2014
Sacramento Convention Center
Sacramento, CA
