

The University Senate of Michigan Technological University

Proposal 10-08

(Voting Units: Full Senate)

"The Use of Metrics at Michigan Technological University"

The use of metrics as a measure of progress toward strategic goals is being increasingly used at Michigan Technological University.

In the spirit of good communication, the senate requests that all metrics used by the university are linked to a "dictionary". The dictionary will clearly define the metric, show how it is calculated, explain how the data is collected, and any other definitions needed to understand the meaning of the metric.

The existence of a dictionary will greatly enhance communication throughout the university community.

Proposal 10-08:

Never introduced to Senate
