

# Sustainability & Resilience at Michigan Tech

## How to get involved:

You can start by considering ways to incorporate sustainability and resilience into your own life, considering the impacts of your actions on the earth and other people in both the present and the future.

► There are many ways to get involved with groups and activities on campus:

### Faculty

To learn more about sustainability in the classroom, contact SFI ( [www.mtu.edu/sfi](http://www.mtu.edu/sfi) ) and IDEA Hub.

Consider ways to integrate sustainability and resilience in education and research.

► For more information about sustainability research, contact David Shonnard.

Faculty can also be sustainability liasons.

► For more information on becoming a faculty sustainability liaison, contact Chelsea Schelly.

### Students

Engage in sustainable behaviors on campus such as recycling, minimizing waste, and considering impacts, get involved with a student org or enterprise group, or talk to or become a sustainability rep in the residence halls.

### Staff

Consider ways to change purchases to more sustainable supplies such as recycled paper and local coffee. Integrate recycling and waste minimization into your units.

Engage in leadership by serving as a sustainability liason in your unit.

► For more information on becoming a staff sustainability liaison contact Alan Turnquist.

Every person can play a valuable role in advocating for a more sustainable Michigan Tech - in the classroom, in the office, and in the community.
